

# EXCHANGE<sup>®</sup>

# INFINITE POSSIBILITIES

Using just 7 injection molded plastic components and a series of support rails, Exchange can be configured to fit any floor plan. Despite its versatile 2 foot seat module, Exchange can support a span of 8 feet between legs for a minimalistic look that reduces clutter often seen with large modular systems. With multiple end configurations, convenience options like power and privacy screens, as well as carefully engineered proportions, Exchange is one of the most effective and robust modular soft-seating systems on the market. Supporting both active work and relaxation, Exchange has the ability to evolve in tandem with today's ever-changing corporate, education, and healthcare environments.
