

INTRINSIC AND SUPERIOR ALL-DAY COMFORT

WHAT

- + Inherently ergonomic and intuitively adjustable, Innate lives up to its namesake by providing intrinsic and superior all-day comfort.
- + Innate offers soft lines and the plush comforts of home with the ergonomic benefits of an office chair, making it beautiful as a work from home chair or in a modern office.
- + Innate's ergonomic-focused design and affordable price point in the new basic model create the perfect match, resulting in a chair that is both functional and accessible for all working environments.

WHY

- + Employee wellness is being integrated into every aspect of the modern workplace, even when that workplace is a home set-up. Ergonomic seating plays a huge role, no matter the environment.
- + Hybrid work schedules blur the lines between work time and free time as more people embrace the duality of both working from home and from the office. Many employees report working longer hours at home versus in the office, and with the lack of traditional conference room settings, users are remaining stationary at their workstations.
- + Ergonomic features, such as an optional headrest and integrated lumbar, are optimal solutions for employees who sit while they work. Supporting the back, head, and neck for hours at a computer, as well as accommodating a variety of tasks throughout the day, are now "must have" conveniences for task seating. These features are needed to keep the user upright and alert while typing, or even allowing the user to lean back in perfect comfort while on a conference call. Innate can adapt to any situation.

HOW

- + The Allseating Innate chair is available both as a meshback or a fully upholstered model and is designed for ultimate functionality. This highly ergonomic chair features key task-focused adjustments to accommodate a wide range of body types.
- + Innate is available with a Black or Birch frame finish and can be dressed in a near endless number of fabrics - including several bleach-cleanable options.
- + An optional encapsulated lumbar can be specified at no upcharge and is surrounded by plush upholstery. The lumbar uniquely engages the flexible webbing straps located in the core of the chair back, which move and contract to mimic the natural curvature of the spine. This height-adjustable lumbar has a range of 4", capable of supporting a wide range of heights. For healthcare environments where sealed seams with no gaps or crevices are required, Innate can now be specified with no adjustable lumbar.
- + A highly ergonomic version features an integrated Italian-grade weight-activated mechanism, including height adjustability, tilt lock and an integrated seat slider. Adjustments are cable-activated for an easy and smooth experience, while the hidden cables lend to a cleaner aesthetic.
- + Highly ergonomic N3 arms allow for 60 degree rotational movement around the user, while also including 3.75" of height adjustability and 245-degree pivoting arm caps, culminating into one of our most ergonomic arms to date.
- + Optional 2-directional N2 arms available with height adjustability of 4" and width adjustability of 1.5" on each side.
- + An optional headrest boasts both pivoting movement and 2.5" height adjustability for optimal comfort and support.

- + Allseating's recent unveiling of the new Innate Basic model provides a more accessible solution with many of the same great features and functions that the traditional Innate is known for. Beginning at a much lower base price point, this new model includes a standard synchro tilt mechanism with an optional seat slider, and can be specified with a variety of arm adjustments.
- + Now featuring a meshback option, Innate can be specified with 3 distinct mesh patterns available in a variety of colors: The standard M10, M2 and M12 (our latest mesh introduction that offers the texture and feel of woven textile).

DESIGNER

- + Todd Yetman, is a GOOD DESIGN Award winner and long-time collaborator with Allseating. Known for putting fit-and-finish first and designing products that are aesthetically clean, poetically beautiful and classic, Yetman is the founder of Toronto-based industrial design and engineering firm Yetman & Co.
