

R.E.S.[®]

RESEARCH, EDUCATION, SOLUTION

The product of intense design development and expert research, R.E.S. is a seating solution that supports active learning through a thoughtful, modern aesthetic and variety of adaptable features. It is a unique hybrid of designs—combining elements of comfortable lounge seating with that of focused task seating. Institutions are increasingly veering toward a learning experience that is based on the principles of active learning. Applying knowledge and problem solving in small group settings are becoming more widespread, as opposed to acquiring knowledge through traditional, lecture-based formats. More flexible and nimble seating options are required to augment the experience of active learning, and R.E.S. offers a mix between individual work styles and collaborative dialogue.
